

Pure Korean Marine Collagen *Peptides.*

*Approach, findings & prioritized recommendations
for the Wellbeing Nutrition PDP.*

PREPARED FOR

Troopod

PREPARED BY

Anand Mishra

DATE

Aug 2026

How I approached this.

“*Marine collagen is a **trust purchase**, not an impulse purchase — customers ask “**does this work**” before they ask “**what does it cost.**”*”

THE FOUR-QUESTION AUDIT

Every section of the PDP was audited against these four questions, in this order:

STEP 01 · COMPREHENSION

Can they understand it?

Is the value proposition instantly readable within 5 seconds of landing?

STEP 02 · TRUST

Can they trust it?

Are the claims backed by verifiable clinical evidence and social proof?

STEP 03 · JUSTIFICATION

Can they justify it?

Does the price feel fair given the perceived value and alternatives?

STEP 04 · COMPLETION

Can they complete the purchase?

Is the path from “yes” to checkout frictionless on any device?

What’s working — *and worth protecting.*

Before critique, credit. The PDP already gets several fundamentals right — and any redesign should preserve, not overwrite, these strengths.

- 

Premium brand aesthetic
Restrained palette and typography signal “clinical premium,” not mass-market supplement.
- 

Strong clinical grounding
Peptide-size disclosure (5 kDa), NaticolÂ® reference, and superscripted claims read as evidence-first.
- 

Clear benefit hierarchy
Skin, hair, joints, gut — benefits are named plainly instead of hidden inside marketing prose.
- 

Meaningful review volume
Enough reviews to signal category legitimacy — the raw material for stronger social proof exists.
- 

Sensory differentiation
Peach Fizz + effervescent format solve the “fishy powder” objection that kills adherence.

FIG 01 · PDP WIREFRAME · ANNOTATIONS MARK EXISTING STRENGTHS

Every finding maps to *one of four business levers*.

Not “what looks broken.” Every issue is scored against the P&L line it moves — so trade-offs are visible.

TOTAL AUDITED FINDINGS

12

Distributed across 4 levers.

REVENUE DRIVERS →

LEVER 01

Conversion Rate

Percentage of PDP visitors who reach checkout. The biggest short-term lever.

FINDINGS
6

LEVER 02

Average Order Value

Basket size at checkout. Unlocked by pricing psychology and bundle logic.

FINDINGS
2

LEVER 03

Customer Lifetime Value

Revenue per customer over time. Where subscription and retention economics live.

FINDINGS
2

LEVER 04 · CROSS-CUTTING

Trust

Cuts across all three — without it, none of the other levers can move.

FINDINGS
3

Where the funnel is *leaking revenue*.

FINDINGS ON THIS SLIDE

05

Ranked by revenue impact. One flaw, one fix — per finding.

01

CONVERSION

Above-the-fold disconnect

Flaw · price and Add to Cart require scrolling; the hero fails the 5-second value test.

Fix · hero must show title, reviews, price, variant selector, and a large ATC button with zero scroll.

02

TRUST

Trust badges disconnected from claims

Flaw · clinical superscripts point nowhere; badges float far from the claims they validate.

Fix · link every claim to its study; move FDA/clinical badges next to the ATC button.

03

CONVERSION

No sticky Add-to-Cart bar

Flaw · once users scroll into ingredients, FAQs, or reviews, there's no persistent CTA.

Fix · add a scroll-triggered sticky bar with product name, price, and Add to Cart.

05

TRUST

Fake urgency banner

Flaw · a “24-hour flash sale” that never resets erodes reference pricing and long-term trust.

Fix · replace with a real countdown or an honest “Subscribe & Save” evergreen value prop.

FINDING 04 · STRATEGIC PRIORITY

Weak message-match with paid traffic.

Flaw · the PDP assumes high-intent browsing, not a cold click from an ad. Ad promise and landing headline don't rhyme.

Fix · build a dedicated high-intent landing variant that restates the specific ad hook in the hero headline — the same “ad-to-landing-page experience” Troopod calls out.

PRIORITY TAG

Highest
strategic value

First-order thinking is *leaving money on the table.*

FINDINGS ON THIS SLIDE

04

Every finding below either raises basket size or the CAC-to-LTV ratio. These compound quarter over quarter.

06

AOV

1

3

Pricing tiers hide the per-unit value

Flaw · tiers show total price only — no per-bottle math, no value anchor, no comparison framing.

Fix · add per-unit pricing on each tier and tag one option as “Best Value” / “Most Popular.”

07

AOV

+

No frequently-bought-together

Flaw · no cross-sell logic; the PDP treats every session as a single-SKU decision.

Fix · add a Collagen + Vitamin C bundle — Vitamin C is scientifically required for collagen synthesis, so it’s a legitimate educational upsell, not a bolt-on.

09

TRUST + RETURNS

DIETARY

Veg / non-veg disclosure is buried

Flaw · this is fish-derived marine collagen; in India, dietary status is often a binary purchase filter.

Fix · surface a small veg/non-veg indicator next to the variant selector to prevent post-purchase returns.

★ FINDING 08 · STRATEGIC PRIORITY · LTV

No subscription, despite an 8–12 week usage cycle.

Buy

Week 4

Runs out

Never returns
(no subscription)

Without a “Subscribe & Save 20%” toggle, the brand optimizes only for first-order conversion — not the CAC-to-LTV ratio the founder ultimately reports on.

Fix · add a Subscribe & Save toggle at the variant selector, defaulted OFF, with clear cancel-anytime copy.

What I’d build first — *and what I’d defer.*

THE SEQUENCING PLAN

PHASE 01 · THIS SPRINT

Ship the Quick Wins.

Dots A–D. Low engineering cost, immediate CR + AOV lift. Ship without A/B tests — the risk of NOT doing them is greater.

PHASE 02 · NEXT 2 SPRINTS

Validate the Major Projects.

Dots E–G. Bigger builds; ship each behind an A/B test with a pre-declared success metric.

PHASE 03 · STANDALONE ROADMAP

Paid-traffic landing page.

Dot H. Not a PDP fix — a separate surface with its own copy, its own hero, its own success metric. Owned by growth, not merchandising.

“Ship the Quick Wins this sprint. Validate the Major Projects with A/B tests. Treat the paid-traffic landing page as a separate initiative.”

Where the deck meets *the HTML deliverable*.

BEFORE

The current hero.

AFTER

The redesigned HTML hero.

NEXT STEPS

01

Validate top 3 hypotheses

A/B test sticky ATC, hero rebuild, and per-unit pricing. Pre-declare success metrics.

02

Build the paid-traffic landing

A dedicated variant that restates the ad hook — measured independently of the PDP.

03

Layer in the subscription flow

Move the P&L conversation from CR alone to CAC-to-LTV ratio.

Thank you — happy to walk through any of the 12 findings in detail.
